Birds in Vietnam in December 1993 and December 1994

J. N. DYMOND

Noteworthy records of birds observed during visits to Vietnam in December 1993 and December 1994 are detailed. A full account is given of the discovery of Grey-crowned Crocias *Crocias langbianis* at Ho Tuyen Lam, near Da Lat, Lam Dong Province.

During December 1993 and December 1994 various forest sites in Vietnam were visited. Each of the sites had previously been surveyed at least once by the BirdLife International/Forest Birds Working Group expeditions of 1988, 1989/1990 and 1991, though only the 1989/1990 surveys were carried out during winter months (Robson *et al.* 1989, 1993a and b). Most of the observations made reflect the findings of these earlier surveys or other recent observations by J. C. Eames, C. R. Robson, Nguyen Cu, Uthai Treesucon and several tour groups.

Thirteen species listed as globally threatened by Collar et al. (1994) were recorded. Of these 11 are treated as Vulnerable, though significant observations were made for just two, Imperial Eagle Aquila heliaca and Short-tailed Parrotbill Paradoxornis davidianus. The other Vulnerable species recorded were Germain's Peacock Pheasant Polyplectron germaini, Crested Argus Rheinardia ocellata, Green Peafowl Pavo cristatus, Red-collared Woodpecker Picus rabieri, Blyth's Kingfisher Alcedo hercules, Lesser Adjutant Leptoptilos javanicus, Yellow-billed Nuthatch Sitta solangiae, Black-hooded Laughingthrush Garrulax milleti and Collared Laughingthrush G. yersini.

More important was the observation at Nam Bai Cat Tien National Park of a pair of White-shouldered Ibises *Pseudibis papillosa davisoni*, a taxon that is treated as Endangered. There have been a number of sightings in the park since July 1991 and its continued survival there is noteworthy.

By far the most exciting and significant observation was the discovery of Grey-crowned Crocias *Crocias langbianis* at Ho Tuyen Lam, near Da Lat, Lam Dong Province; the species is treated as Critically Endangered by Collar *et al.* (1994).

RECORDS OF PARTICULAR INTEREST

GREAT BARBET Megalaima virens One was heard calling on a ridge above Bong substation, Cuc Phuong N.P. (c. 600 m) on 13 December 1993. According to King et al. (1975) this species is resident above 900 m in South-East Asia, but seasonal altitudinal movements occur in Nepal (Inskipp and Inskipp 1991). Not previously recorded at this site, though already noted for North Annam and Tonkin by King et al. (1975).

JERDON'S BAZA Aviceda jerdoni A pair was seen (one of which was tape-recorded) near Tu Phuc on 23 December 1993. Though recently recorded from sites in East Tonkin

(Ratajszczak 1987), northern Vietnam (Stepanyan 1987), Cochinchina (Morris 1986) and South Annam (Robson *et al.* 1993), this is the first record for North Annam.

IMPERIAL EAGLE Aquila hehaca A juvenile was seen at Tam Dao N.P. on 6 December 1993. The first recent record for Vietnam, although noted in Tonkin in the past (King et al. 1975), and ther have been three subsequent sightings, all in East Tonkin (J. Christensen pers. comm. 1995, C. R. Robson in litt. 1995).

MOUNTAIN HAWK EAGLE Spizaetus nipalensis An adult was seen perched and, briefly, in flight at Cuc Phuong N.P. on 12 December 1993. There has been a number of records in recent years in Cochinchina (pers. obs., Akira Hibi pers. comm. 1994, J. C. Eames in litt. 1995, C. R. Robson in litt. 1995), and in Central and South Annam (Morris 1995), but the only previous record in East Tonkin was at Tam Dao N.P. in October 1962 (Fischer 1974).

WHITE-SHOULDERED IBIS Pseudibis papillosa davisoni One pair was seen display-calling at Nam Bai Cat Tien N.P. on 29 December 1994.

GREY-BACKED THRUSH Turdus hortulorum An adult male was seen at Ho Ke Go on 27-29 December 1993. Although previously noted as a migrant at low elevations in Tonkin and North Annam (King et al. 1975), this record is well south of the previously documented range (C. R. Robson in litt. 1995).

Lesser Shortwing *Brachypteryx leucophrys* Two singles were seen near Cuc Phuong N.P. headquarters, one on 8 December and a different bird on 9 December 1993; both sightings, in well-separated locations, were at very close range in areas of very dense understorey in secondary forest, at c. 200 m altitude. According to King *et al.* (1975), the species is resident between 900 m and 2,500 m in South-East Asia. The first records for this locality and at this altitude.

Snowy-browed Flycatcher Ficedula hyperythra A male was seen at close range in understorey near Cuc Phuong N.P. headquarters on 9 December 1993 (c. 200 m), and another male was watched bathing in a stream in primary forest near Bong substation, Cuc Phuong N.P., on 11 December 1993 (c. 450 m). According to King et al. (1975), this species is resident above 900 m in South-East Asia, but in Nepal it has been recorded as low as 275 m in winter (Inskipp and Inskipp 1991). The first records for this locality and altitude, although it was subsequently seen there in December 1994 by J. Christensen (pers. comm. 1995).

Purple Cochoa Cochoa purpurea Two were seen at Tam Dao N.P. on 6 December 1993. The first recent record for this locality, although collected there previously (Delacour and Jabouille 1931). The species is treated as Near-threatened by Collar et al. (1994).

Wire-tailed Swallow Hirundo smithii Two were seen at Ho Tuyen Lam on 22 December 1994. Though noted for South Annam by King et al. (1975), this is thought to be the only record in recent years, and the species may be seriously threatened in Vietnam (C. R. Robson in litt. 1995).

LIGHT-VENTED BULBUL Pycnonotus sinensis Of a total of over 30 birds in scrub at Ho Ke Go on 27-29 December 1993, about 25 were nominate sinensis and at least 5 were hainanus. In Vietnam, King et al. (1975) and Vo Quy (1983) list P. s. sinensis only from East Tonkin, but Robson et al. (1993a) recorded it in Central Annam, so its occurrence at Ho Ke Go, in North Annam, is not surprising. King et al. (1975) record hainanus as a common resident in Tonkin, North and Central Annam.

CHESTNUT-FLANKED WHITE-EYE Zosterops erythropleurus One was seen at Tam Dao N.P. on 4 December 1993. In Vietnam only previously recorded from north-west Tonkin (King et al. 1975).

ASIAN STUBTAIL Urosphena squameiceps Small numbers were seen at Tam Dao N.P. and Cuc Phuong N.P. during December 1993, and one was seen at Ho Tuyen Lam on 18 December 1994. King et al. (1975) record this species from north-west Tonkin, but these constitute the first records for East Tonkin and only the second for South Annam, preceded by a record from Hill 1978 (12°02'N 108°42'E), Lam Dong Province on 16 November 1993 (J. C. Eames pers. comm. 1995).

SULPHUR-BREASTED WARBLER *Phylloscopus ricketti* Singles were seen at Cuc Phuong N.P. on 10 and 15 December 1993. Previously noted for North and Central Annam (King *et al.* 1975), but these are the first records for East Tonkin.

GREY-CROWNED CROCIAS Crocias langbianis Two were seen at Ho Tuyen Lam on 22 December 1994. Full details of this observation are given below.

SHORT-TAILED PARROTBILL Paradoxomis davidianus One was seen at Tam Dao N.P. on 6 December 1993. Previously only recorded from north-east Tonkin (King et al. 1975), this is the first record for this locality, though others have been seen there subsequently by many observers.

COMMON ROSEFINCH Carpodacus erythrinus Two were seen at Cuc Phuong N.P. on 10 December 1993. Listed for north-west Tonkin by King et al. (1975), but this is the first record for East Tonkin and apparently the only record for the country in recent years.

Observation of Grey-crowned Crocias at Ho Tuyen Lam, near Da Lat

Ho Tuyen Lam is a reservoir 4 km south-south west of Da Lat, Lam Dong Province (South Annam); it is a further 5 km to the distant end of the reservoir. The reservoir is surrounded by pine forest *Pinus kesiya*, interspersed with extensive cleared areas supporting agricultural plots. At the southern end of the reservoir the pine forest is backed by

Tropical Montane Evergreen Forest, rising from 1,400 m to 1,700 m, although only the lower zone from 1,400-1,500 m has been explored by ornithologists in recent years. Small scale logging was taking place in the broadleaved forest adjacent to the end of the reservoir, and local people were seen carrying out sacks of charcoal, probably produced on the higher slopes further from the reservoir.

At 12h00 on 22 December 1994, while birding in the evergreen forest about 1 km south of the south-western tip of the reservoir, at an elevation of 1,450 m, I came in contact with a mixed species feeding flock. The understorey was alive with numerous Mountain Fulvettas Alcippe peracensis and a few Rufous-capped Babblers Stachyris ruficeps and White-spectacled Warblers Seicercus affinis, while several White-tailed Leaf Warblers Phylloscopus davisoni and Chestnut-crowned Warblers Seicercus castaniceps and a pair each of Chestnut-fronted Shrike Babblers Pteruthius aenobarbus and Brown-throated Treecreepers *Certhia discolor* were feeding in the more open areas of the middle storey. I then turned my attention to a noisy party of Blue-winged Minlas Minla cyanouroptera in the canopy, some 15-20 m above me. I soon located a single Rufous-backed Sibia Heterophasia annectans among the 10-12 minlas, and then I glimpsed among some dense foliage a rather longer, narrow, graduated tail showing white tips to the underside of each feather. Vague thoughts of a small cuckoo or cuckoo-shrike were soon replaced by palpitations of incredulity when the head and body came into view. It had a fairly short thickish, dark bill, a narrow black mask extending from the bill through the eye to the rear of the ear-coverts, and sparkling white underparts with bold black streaks at the sides of the breast and extending all along the flanks towards the tail - I realised then that I was watching a Grey-crowned Crocias. In fact there were two of them and very soon the one I was concentrating on showed its upperparts: grey crown and nape, warm rufous mantle and rump with blackish feather centres showing as spots on the mantle, and dark grey wings and tail. The Crocias were markedly larger than the Rufous-backed Sibia.

After two to three minutes the flock moved away, but I had further contacts with it and the two Crocias at around 12h15 and 12h40, after which the flock moved across a densely vegetated gully and I was unable to follow. Throughout the total of about six minutes observation time the Grey-crowned Crocias were in close association with the Blue-winged Minlas and the Rufous-backed Sibia. They kept strictly to the canopy, foraging along and around the thicker limbs and among the sprays of leafy twigs, moving slowly much in the mode of the sibia, but at no time venturing on to the main trunks in the manner of a sibia. At no time were any vocalizations heard.

The sole previous field observation of Grey-crowned Crocias was of two birds seen by J. C. Eames and Nguyen Cu on 29 January 1994 at 1,010 m on Chu Yang Sin, some 55 km north of Da Lat (Eames 1994). Eames relates what is known of the circumstances of the original collection of three specimens in April 1938, for which details are somewhat vague and the locality is unclear. However, as Chu Yang Sin is remote and very difficult of access, the discovery of Grey-crowned Crocias at Ho Tuyen Lam, so close to the provincial centre of Da Lat, strongly suggests that the type locality might also be close to Da Lat.

ITINERARIES

December 1993		December 1994		
2-6	Tam Dao N.P.	17	Da Lat	
8-15	Cuc Phuong N.P	18	Ho Tuyen Lam	
17	Hanoi	19	Da Lat - Datanla waterfall	
18	Hanoi - Vinh	20-21	Mount Lang Bian	
20-21	Ha Tinh	22	Ho Tuyen Lam

23-25	Tu Phuc - Cat Bin			
26	Tu Phuc - Ha Tinh	Janua	ry 1995	
27-28	Ho Ke Go	1-2	Nam Bai Cat Tien N.P.	
29	Ho Ke Go - Ha Tinh			
30-31	Hanoi			

MAIN LOCALITIES VISITED

- 1 Tam Dao National Park (21°27'N 105°35'E), East Tonkin
- 2 Hanoi and en route in East Tonkin
- 3 Cuc Phuong National Park (20°15'N 105°35'E), East Tonkin
- 4 Tu Phuc Cat Bin (18°05'N 106°02'E) Ho Ke Go, North Annam
- 5 En route in North Annam
- 6 Mount Lang Bian (12°02'N 108°26'E), South Annam
- 7 Ho Tuyen Lam (11°52'N 108°25'E), South Annam
- 8 Da Lat area (11°57'N 108°27'E)) and Datanla waterfall, South Annam
- 9 Nam Bai Cat Tien National Park (11°27'N 107°18'E), Cochinchina

I would like to thank Doug Judell for his companionship throughout my travels in northern Vietnam in December 1993. Both Doug and I are greatly indebted to Professor Dr Vo Quy for arranging our visit to Tu Phuc and Ho Ke Go in the company of three botanists from Hanoi and Duong Nguyen Thuy from Ha Tinh. Le Van Chiem (director), Nguyen Duy Khang and other staff at Nam Bai Cat Tien N. P. greatly facilitated my stay there. I am most grateful to Jonathan Eames and Craig Robson for their helpful comments on a draft of this paper and to Tim Inskipp for his advice and assistance with references.
